ASSIGNMENT-1

## Name :- Aindrail Santra   Roll No. :- 2029044

Q 1.

The <meta> tag defines metadata about an HTML document. Metadata is data (information) about data.

<meta> tags always go inside the element, and are typically used to specify character set, page description, keywords, author of the document, and viewport settings.

Metadata will not be displayed on the page, but is machine parsable.

Metadata is used by browsers (how to display content or reload page), search engines (keywords), and other web services

Q2.
